About NetComm Limited

NetComm is a fully Australian-owned company with unrivalled expertise in building communications solutions to meet the evolving needs of business and the home

With more than 22 years in Australia and still holding over 60 per cent of the analogue (dial-up) modem market, NetComm is at the forefront of broadband communications; a technology with the potential to transform how people and businesses interact with each other.

Backed by sound local engineering, a powerful commercial and R&D partnerships as well as stellar, year-on-year net profit growth, NetComm is a leading player in the emergence of this exciting vision.

ADSL (Asymmetric Digital Subscriber Line), the largest and fastest growing area of the Australian broadband market, allows for the creation of high-speed networks via standard copper telephone lines. The realisation of the powerful applications presented by ADSL has fueled exponential demand for business and residential connections, with NetComm now established as one of the top preferred suppliers of bundled hardware solutions to Australian ISP's.

As the broadband market matures, demand is increasing for solutions that support secure, reliable, high-speed networking, with or without wires, while also being able to provide a multimedia experience that is seamless.

Broadband provides businesses with a platform to more efficiently distribute marketing, corporate communications and training information. Employees can access office and data systems remotely and securely and make low cost phone calls over the Internet using Voice over IP (VoIP).

For consumers, broadband allows high-speed connections to be shared among users along with data and devices such as printers. Consumers are also taking advantage of VoIP technologies to reduce domestic telephone costs and keep in touch with family and friends around the world.

NetComm offers a wide spectrum of award-winning products and solutions that address the demands of today's dynamic communications market. The company also offers a wealth of customer and partner training programs and resources, which is unmatched in the industry, while providing a unique Cadet program for nurturing promising young talent.

Listed on the Australian Stock Exchange (ASX: NTC), NetComm is one of only a handful of local technology companies to have demonstrated genuine results and endurance, and is an organisation which promises and even brighter future.
